

ADVANCED EMS DIAGNOSTIC AND DEVELOPMENT TOOLS

T-21 (Palm Pilot):

Palm based real-time monitoring of ECU and sensors. Can be used to identify which malfunctioning sensor turned the "Self Diagnostic Light" on, and can also be used to reset the light.

Laptop or PC Based Proprietary Software EMS Development Tool Kit:

Allows real-time monitoring of ECU and sensors, changing and/or re-mapping of the ECU's fuel and ignition maps as well as the sensor calibration values.

Advanced users can use the development tool kit to design, map and program engines to a desired performance or emission level in short time.
